On campus food delivery

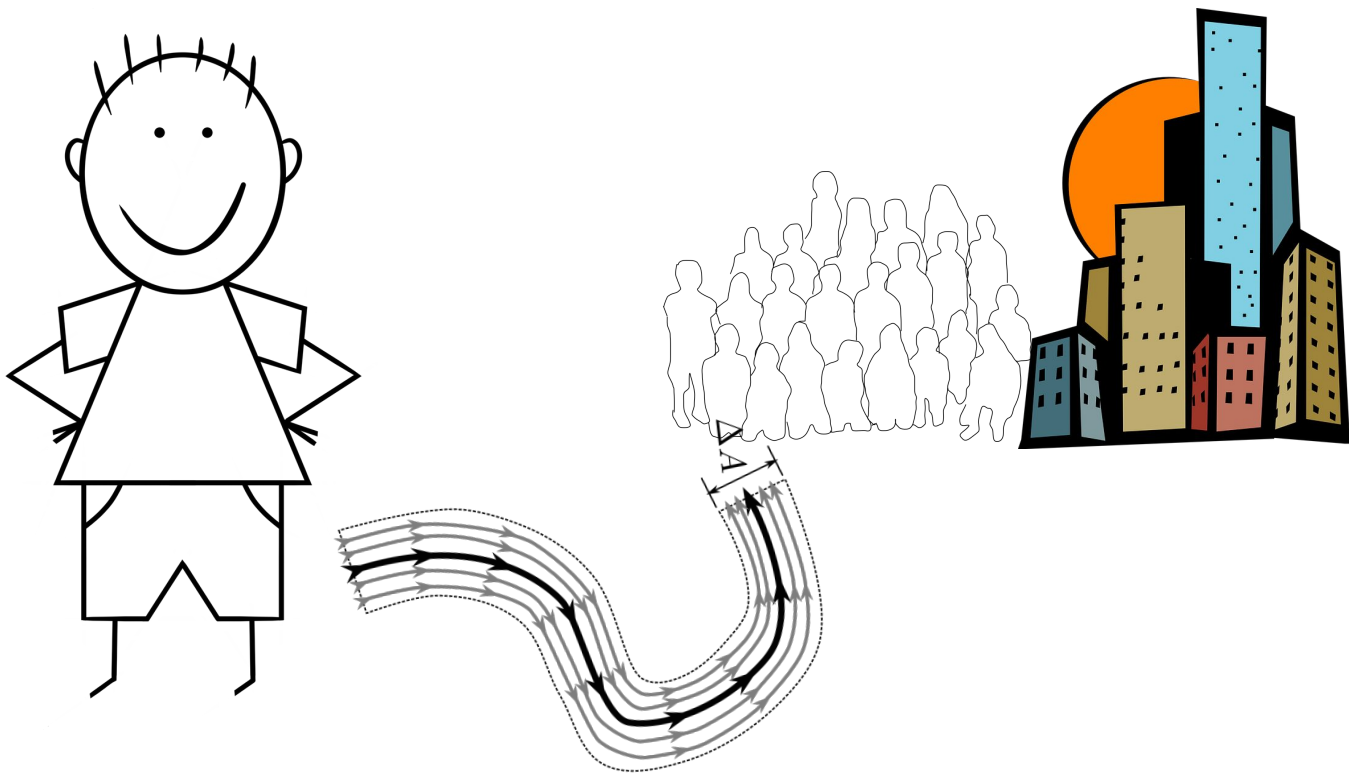

Kristina Vignas Storyboard

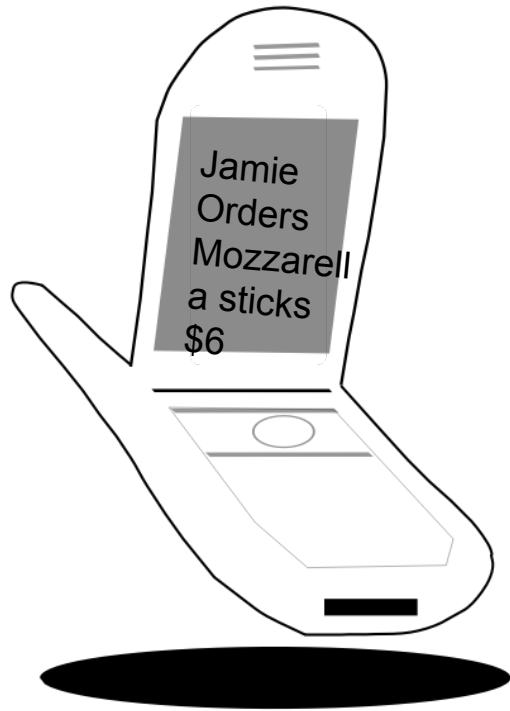

Jamie is a college student that doesn't have time to get food on a regular basis because needs to do hw and study for her test.

Jamie never has time to eat so he eats a lot of junk food. Even though her mom warns her not to.

Jamie would walk the cafeteria to get food but its so far from campus and the lines are very long.

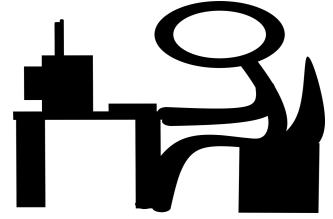

Delivery will take one hour

Jamie orders food using the college food delivery app so she can save time and get more work done.

Food delivery Table

George doing his work
while his food is delivered

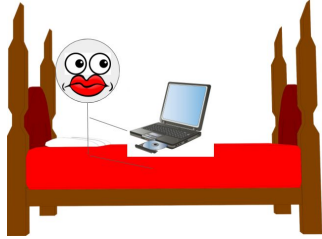

The food gets delivered downstairs of Jamie's dorm. She has been doing a ton of work since she ordered food

Jamie gets notified that her food arrived and she is so happy about the time she managed to save.

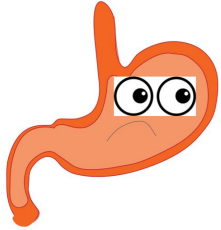

Nazaye's Storyboard

Abraham is working hard to maintain his great grades.

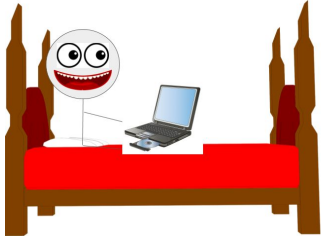

Abraham decides to order from one of the many food options that his campus offers.

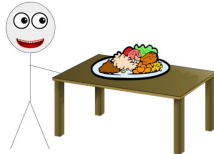

All of a sudden, Abraham's stomach starts growling. He doesn't want to leave his room to get food though.

Abraham's food then gets conveniently delivered to his dorm room.

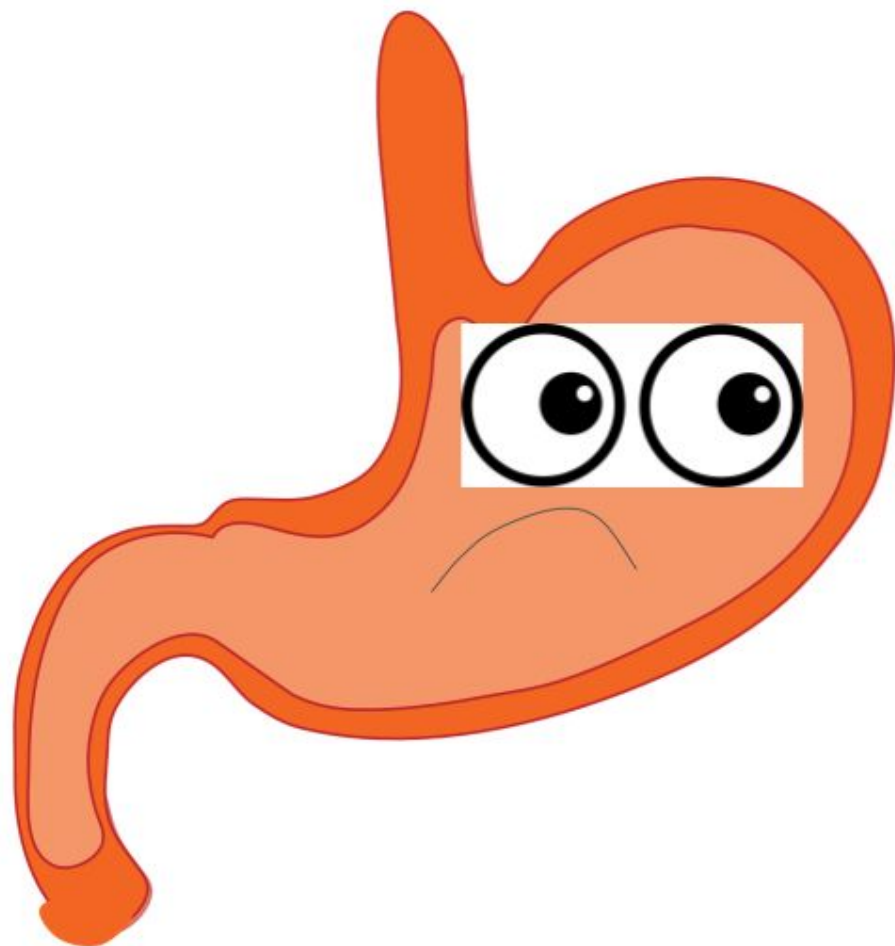

He then realizes that there is a new app that delivers food to his dorm.

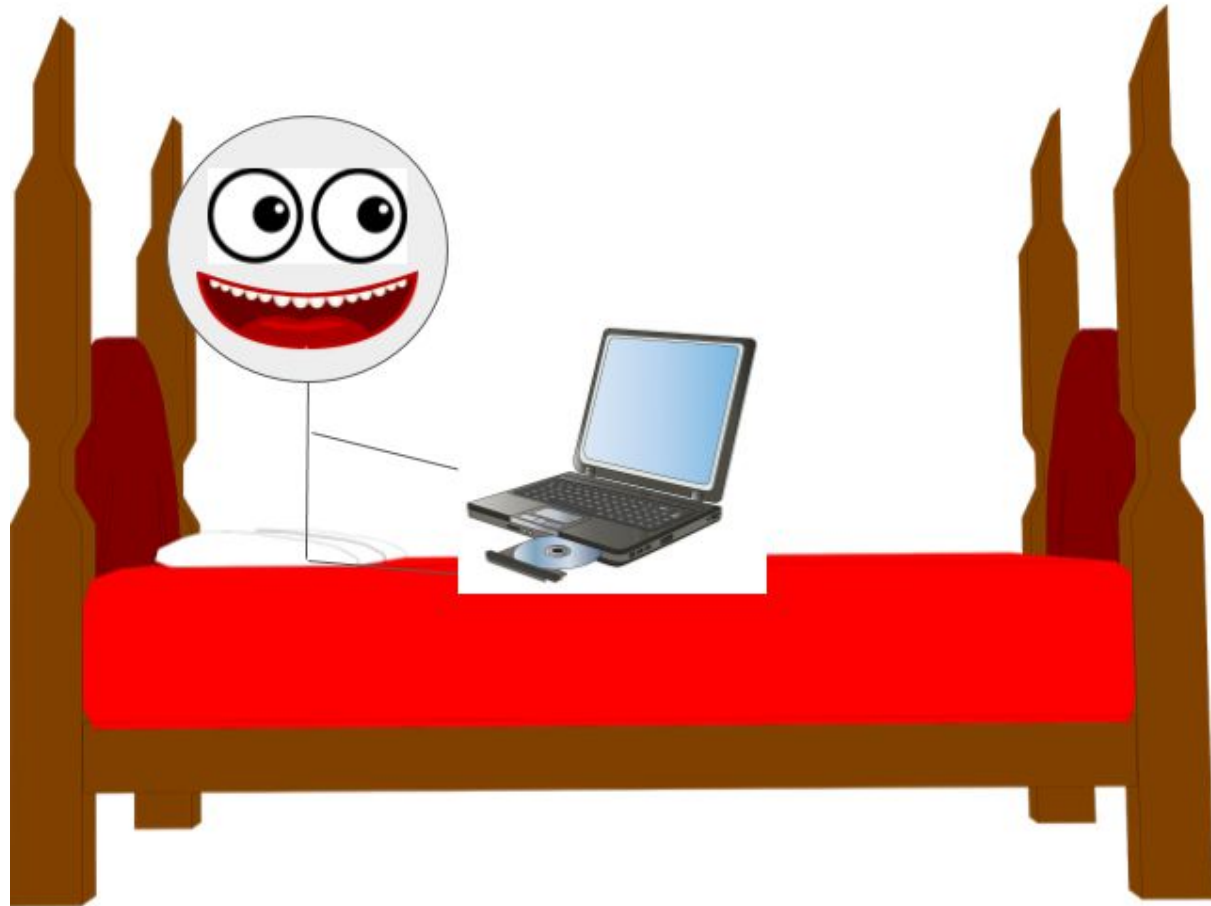

Afterwards, Abraham gets to enjoy his delicious food that he didn't even have to leave his room for.

Bryson's Storyboard

Elias is a computer researcher for IBM that works with a university and with professors. With the amount of time he has to dedicate to his research, he has no time to go and get food from on campus restaurants.

With Elias never being able to leave to go get food, he always has to either bring food from home or not eat and rely on energy drinks and caffeine to get him through the day.

Although Elias could go in person to the on campus restaurants, the way it is now, there are too many people and orders for him to get his food and back to the lab in a reasonable time.

Elias finds this new app that he can use to cut the time that it would take to get his food from campus by having available to be delivered to his research lab on campus.

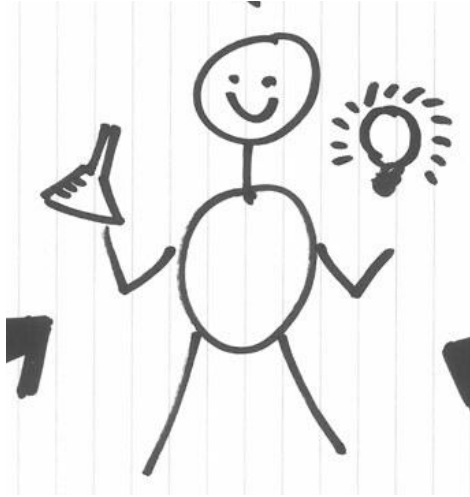

Elias, the next day tested the app out and ordered a burger to be delivered to his lab the next day. He was immediately notified that his order had been received and would be delivered within 45 minutes of his order.

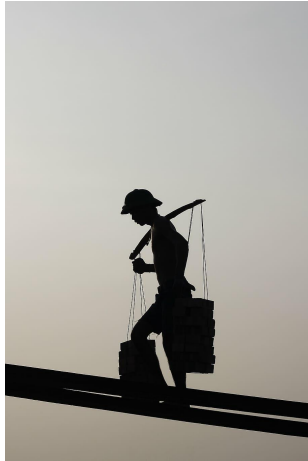

About 30 minutes later, Elias had his burger that he had ordered, and he decided that this would be the way that he ordered his food from on campus now because it decreased the amount of time that he would be away from his research.
